

**\*Important\*** TRAUMAsoft & OpiQ Notes & Updates 10/19/2023

TRAUMAsoft has released a new iOS & Chrome app, which I have pushed out to the devices

**This app SHOULD BE USED versus using the chrome browser on mobile devices !**

- The FIRST time the app is used, you may have to enter an activation, which is simply putting “mercyflightinc” in the box

- 
- The app handles losing connectivity, by storing data entered until sync'd, in the event of wifi signal loss.
- This should help eliminate loss of DOB, VS, etc in the field
  - The upper left corner “drive” icon will remain green if device is “ok” to store data, so you don’t have to wait for a white icon
  - The upper left cloud icon should be white if all is good
- Please continue to ensure data is transferred, and best practice is still to exit a PCR by going to LIST RUNS before exiting the application

- ***Please remember to correct scene addresses by clicking on them and selecting google address***

○ le: <- click on it and select the correct google suggestion, and it fixes and populates the address, city, state, zip fields correctly

○ .

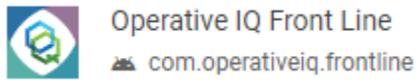

Incident Street Address	Required	247 Park St, Arcade, NY 14009, USA
		247 Park St Arcade, NY 14009, USA
Incident Location Type	Required	Single-family non-institutional (private) house
Incident Street Address	Required	247 Park St
Incident Apartment, Suite, or Room		
Incident City	Required	Arcade
Incident State	Required	New York
Incident ZIP Code	Required	14009
Incident County	Required	Wyoming County
Incident Country	Required	United States

○ this is corrected

- **Please remember to use the *SELECT FROM CAD FACILITIES* button** when entering destination Hospitals and SNF's
  - This adds facility codes, and gives destination PCR delivery info to the system

You will also see a new TRAUMAsoft MDT app, which will come into play once we start using TRAUMAsoft CAD

There is also a new app for the OperativeIQ Frontline. The old app has been removed
